CELLCRISTIN 1MG INJ 1X1ML: Reminder on Proper Administration to Minimize the Risk of Incorrect Use

Dear Healthcare Professional/s,

As part of our ongoing commitment to ensuring the highest standards of patient safety and product quality, we would like to draw your attention to an important handling measure regarding **Cellcristin 1mg Injection (1×1 mL)**.

A **safety reminder sticker** has been locally applied to each folding box of the product. The sticker appears as follows:

This safety reminder is intended to reinforce the critical instruction that Cellcristin is for strict intravenous (IV) administration only.

To ensure that this message remains clearly visible at all times during product preparation and administration, we kindly request the following:

Upon opening a box of Cellcristin and prior to administration, **please remove the safety sticker from the outer carton and apply it directly onto the vial.**

This measure is essential in any situation where multiple vials are handled in parallel or where the vial may need to be retained or reused within institutional procedures.

This step is designed to **eliminate any risk of incorrect administration**, including inadvertent non-IV administration, which may result in **severe harm or could be fatal**.

We highly appreciate your collaboration and continued commitment to implementing this safety measure to prevent any risk of incorrect administration of Cellcristin.

Sincerely,

Ibrahim Boukhary

Regional Pharmacovigilance Officer – Middle East
